

# Do You Require Dedicated and Reliable High-Speed Connectivity?

We provide data circuits for reliable, scalable and resilient connectivity directly to the Internet as well as point to point connectivity enabling un-contended bandwidth between sites.

For companies who want to send multiple types of traffic - voice, data and multimedia - over a single network, MPLS offers a resilient and scalable solution.

## Point to Point Circuits

All our products are offered with a stringent SLA to ensure that a proven high quality of service management is retained

Point to point circuits are ideally suited to organisations requiring exclusive connectivity between geographically distant offices, with an always-on service and an assured level of quality.

Our point-to-point leased lines are for companies with varying bandwidth requirements which require one scalable network to connect between two sites. VoIP and mission critical or standard data traffic can all be securely and reliably carried and prioritised as required by the customer.

Larger organisations can also use our leased lines to create a Virtual Private Network (VPN).

We offer point to point circuits with speeds ranging from 128Kbit/s to 1 Gbit/s.

## Internet Access

We provide leased lines that offer secure and un-contended access to the Internet. We partner with all tier one carriers and offer Internet access over our own core network. We also offer a variety of disaster recovery options, providing reassurance for business critical applications.

Our services are offered fully managed with a choice of router, firewalls and spam filters. These are also supported by a 24 hour monitoring and maintenance service which keeps you in full control and allows you to track the performance of your connections with online reports. Alternatively, we also provide a wires only service.

Our fully managed Internet access caters for business critical systems and applications. With a range of options available, we can balance affordability with your day-to-day operational needs.

## MPLS

MPLS (Multi-Protocol Label Switching) is a cost effective, secure and fully managed network service that allows you to connect your geographically dispersed sites.

Our MPLS provides the security of a VPN with superior performance for business critical applications, allowing you to benefit from converging voice, data and video traffic onto the same network. Classes of service can be provided to control voice, multi-media, assured/standard data and delay sensitive applications.

## What Do We Offer?

- High performance, reliable, un-contended connection
- Industry leading account management and support
- 24/7 UK based technical support
- A choice of speeds ranging from 2Mbps to 1Gbps
- A choice of connectivity options – fibre or copper
- Scalable connectivity via Ethernet
- Support and maintenance by a business critical SLA
- Choice of backup options including ADSL, SDSL and Digital lines
- Fully managed solution including a pre-configured Cisco router
- 24/7 monitoring
- Symmetrical bandwidth
- Choice of access options
- Worldwide coverage
- Easy expandability
- Spoke and any-to-any circuits
- Class of service – prioritise mission critical data

We have years of experience in delivering leased lines, ensuring excellent service from your initial enquiry, through to installation and beyond

## Access options

Home workers:  
Connect remote workers into your company VPN

- Standard** A single, dedicated and un-contended, always-on Internet connection.
- Flexible** A scalable service allowing you to scale your bandwidth up and down on a monthly basis as your business needs dictate. Upgrading is simple and results in minimal disruption.
- Resilient** Offers the reassurance of a secondary, dedicated back-up Internet connection.

We have a number of different data circuit services to suit the increasing and varied demands of today's business environment. For further information on this or any of our other services please contact a member of the Sales Team.
